

**Technology – Improve Accuracy & Speed of NOTAM Submission
&
Areas where industry can partner with FAA to improve the US NOTAMs**

Topics

- Submission of NOTAMs - Evolution of the process
- Distribution of NOTAMs - Making information available to users
- What can be improved? - Thoughts on taking it to the next level
- FAA & Industry Collaboration - How together we can enhance safety!

Evolution of NOTAM Submission

- NOTAM Submission process has significantly improved with FNS
- Airports could NOT submit their own NOTAMs directly
 - They had to call Flight Service (FSS) to issue NOTAMs
 - Took more than **15 minutes** on an average
- With FNS-NOTAM Manager, Airports can manage their own NOTAMs
 - NOTAMs can be issued, cancelled or replaced in **seconds**
- NOTAM Manager has increased the quality & accuracy of NOTAMs
 - By the use of scenario templates you no longer need to type the NOTAM text
 - Business rules validates NOTAM before publication
 - Policy changes are automatically handled by the system
- More than 1200 airports use NOTAM Manager today

Built for the Future - Digital Age

- Scenario templates were developed after reviewing 1000's of NOTAMs
- All scenario/template based NOTAMs are **digital NOTAMs**
 - Before it was just a text string →Analog
 - Enables capture of geometry →Graphical display
 - Enables validation →Improved accuracy
 - Transform to any form →NOTAM Text
 - Ready for Machine Interpretation!

VS.

Distribution of NOTAMs

- Published NOTAMs (once numbered) are available both via Web and SWIM
- Where can you get them?
 - NOTAM Search (<https://notams.aim.faa.gov/notamSearch/>)
 - NOTAM Distribution Service (NDS) via SWIM
 - Subscribing to this service will push you NOTAMs the moment it is published
- NOTAM Search supports
 - Sorting
 - Filtering
 - Flight Path Search
 - Free-text search
 - Few others

What can be done better?

General Reported Issues on NOTAMs

- NOTAMs are unreadable
- Information Overload
- Hard to parse through to find relevant information
- UPPER case is unreadable
- Use plain english instead of acronyms
- Categorize information

The near miss incident on July 7, 2017 at SFO is a an example

Graphical Visualization of NOTAMs

- Graphical representation of the NOTAM eliminates ambiguity
- Easy to follow the information than reading the text
- Compare the example below – which is better?

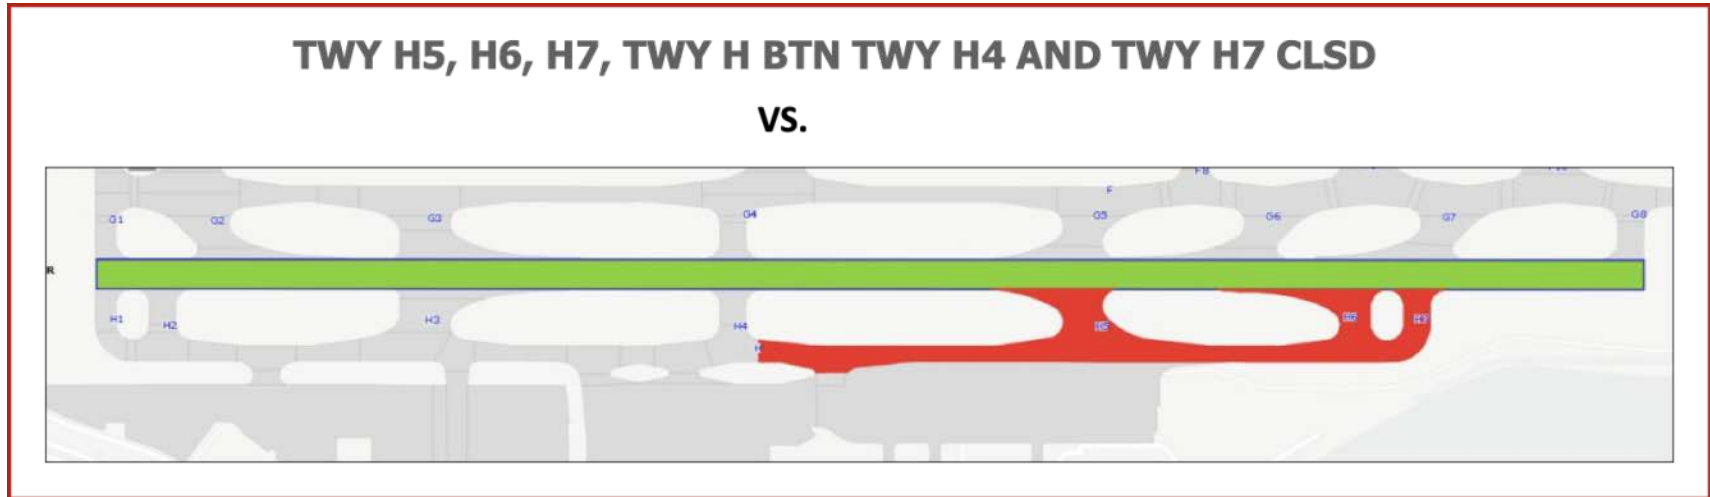

Figure is a mockup not real

Create NOTAMs Visually

- Accurate output needs precise input
- Use underlying map to identify the impacted area rather than text
 - Eliminates ambiguity as they are selected precisely by viewing the map
 - Today the process is cumbersome and originator doesn't know how the user is going to interpret the NOTAM
- Providing end-to-end visualization of NOTAM enhances safety!

Figure is a mockup not real

Other Thoughts

- Metrics, Analytics and Dashboard
 - Measure impact of NOTAMs on operations
 - Use information to improve operational efficiency
 - A real-time dashboard showing the current NOTAMs visually
- Eliminate NOTAM distribution delays
 - Enabling real-time distribution has many benefits
 - Make the information available the moment it is published
 - Technology exists today to make this happen - Twitter good example
- Automatic NOTAM creation
 - There is opportunity in some areas to automatically create NOTAMs
 - Obstacle Tower Light is a good example
- Good airport map with standardization is key
 - Accurate visualization needs good maps
 - Update as required to reflect current condition

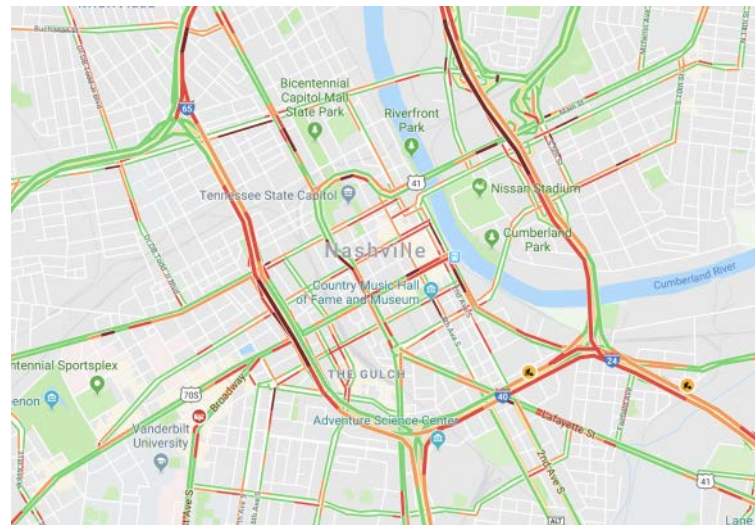

Where can Airports/Industry Help?

- Use of scenario templates instead of Free-Text NOTAMs
 - Allows you to publish directly without going through Flight Service
 - Consistent NOTAM and enables visualization and machine interpretation
 - Convey to the FAA missing templates for NOTAMs that are commonly issued
- Standardization of maps and consistency
 - Good maps key for visualization
- Accuracy and timeliness of NOTAMs are very important
 - Issue and cancel them when the condition changes
 - Account for the small delay in communicating the information today
 - Use NOTAM Manager to your advantage!

Final Departing Thought...

Real Time Situational Awareness

- NOTAM - A Means to an End
 - Ideally Pilots and Others shouldn't need all these papers and NOTAMs
 - Information should be updated as they happen and should be communicated/integrated
 - Automatic interpretation, so no need to read NOTAMs
- Example - how do you get alerted on traffic conditions?
 - Maps automatically get updated
 - Even systems are smart to reroute to get you quickly to the destination
