# The Conundrum of Reducing Environmental Impacts while your Airport Grows

## Part 1 – Airport Information Sharing

- ➔ What is the project?
- ➔ What level of attention is it getting (Internal stakeholders/External Stakeholders)?
- ➔ Are environmental impact reductions a requirement to achieve approvals for the project to move forward?
- ➔ Approximately what is the incremental cost impact of incorporating environmental impact reduction?
- ➔ What element of the project are you and the team most proud of?

# Common Conundrum Themes

## Part 2 – Airport Information Sharing

- Ensuring environmental components are maintained through design, construction, & operations
- Developing staff environmental knowledge and technical expertise across the airport organization
- Effectively partnering with airlines, concessions, FBOs, and others (i.e. they are part of the problem, so they need to be part of the solution!)
- Managing and responding to passenger, community, and political expectations
- Environmental review (i.e. NEPA) needs to inform/ lead decision making

### What Next to Address (ACI-NA context)?

- Cross-committee work?
- Policy development?
- Outreach to other organizations (e.g. A4A)?
- Programming for CEO level?

See you in
