Join us as we explore the fast-changing landscape regarding cyber risk management and liability. Airports are often made up of hundreds of systems and networks that interconnect people from multiple organizations, not just airport staff and vendors. Having visibility to all of these areas can be a daunting task but necessary if your airport is going to properly understand the associated cyber risks. In this session, we will hear from industry cyber insurance experts and airport IT and cyber professionals regarding proactive approaches airports should take to lessen the risk of cyber exposure. Topics will include cyber risk assessments, data breach planning and incident response. Discussion on best practice security approaches to social media, patching, and interactive awareness training will be explored.
